

LARGEST NUMBER IN A RANGE USING ARRAY

Aim

To find the largest number from a given range of elements using an array in RAPTOR.

Algorithm

1. Start.
2. Read the number of elements n .
3. Read the array elements $A[1]$ to $A[n]$.
4. Assume the first element as the largest: $\text{largest} = A[1]$.
5. Compare each remaining element with largest.
6. If $A[i] > \text{largest}$, assign $\text{largest} = A[i]$.
7. Repeat until all elements are compared.
8. Display the largest element.
9. Stop.

Sample Input

$n = 3$

Array Elements: 12 47 93

Sample Output

Largest Number = 93

main

Input

"Total no of elements:"

3

Done

main

Input

"enter element:"

12

Done

n: 3
i: 1

n: 3
i: 2
> A[]

main

Input

"enter element:"

47

Done

n: 3
i: 3
> A[]

main

Input

"enter element:"

93

Done

Result

The largest number from the given array was found successfully using RAPTOR.
