

REVERSE A STRING

Aim

To reverse a given string using RAPTOR.

Algorithm

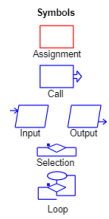

1. Start.
2. Read the input string str.
3. Initialize rev as an empty string.
4. Traverse the string from the last character to the first.
5. Append each character to rev.
6. Display the reversed string.
7. Stop.

Sample Input

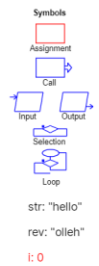

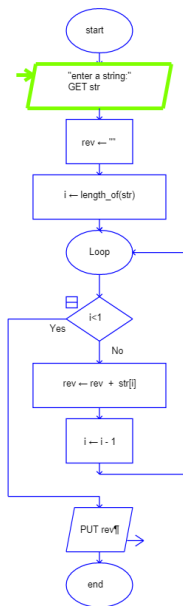

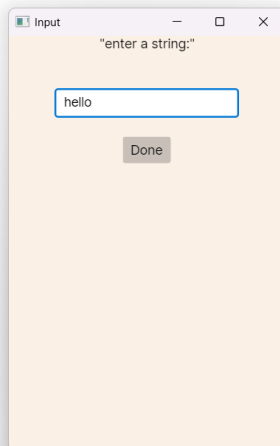

str = "hello"

Sample Output

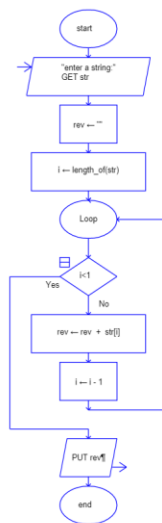

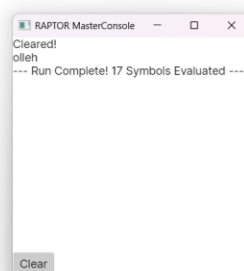

rev = "olleh"

main

main

Result

The given string was reversed successfully using RAPTOR.
